

Kraków 14.12.2024

**To Whom It May Concern,**

I am honored to recommend **Gaetan Longrée**, who has served as a Senior Technical Consulting Engineer specializing in Digital Network Architecture and Cisco Software-Defined Access (SDA) solution. In my 23 years of professional experience, Gaetan stands out as one of the most skilled, talented, and dedicated engineers I have had the privilege to work with.

Since joining Cisco's Technical Assistance Center in 2019, Gaetan has consistently demonstrated exceptional expertise in complex technologies across diverse domains. His knowledge spans traditional network engineering, including wired and wireless communication, routing, switching, and security. Additionally, he has developed significant expertise in identity management, traffic segmentation, and system engineering, including Kubernetes-based architectures, container platforms, and databases. His problem-solving skills and technical insight have established him as a trusted advisor for customers and a key escalation point for colleagues and engineering teams.

In addition to his technical strengths, Gaetan has excelled as a team leader. Serving as a role model for a team of 20 engineers, he has mentored colleagues, fostered collaboration, and consistently upheld a culture of excellence. Customers and peers alike have valued his professionalism, ownership, and ability to resolve critical challenges with efficiency and precision.

Gaetan's unique combination of technical expertise, leadership, and customer focus makes him an extraordinary asset to any organization. I wholeheartedly recommend him and am confident he will make a significant impact in any future role.

Sincerely,

**Jarosław Gawron**

Principal Engineer, Cisco TAC, Kraków, Poland.
